Safety

Ammonia is the most widely used refrigerant in the food and beverage industry. Having ammonia in your facility can become deadly if no safety precautions are taken. There are several ways that you can ensure your facility reduces the risk of leaks and injury.

Saving You Green By Making You Green

If your plant has a boiler and a refrigeration system, you owe it to yourself to call us.

Gartner Refrigeration has been in the industrial refrigeration business for over 60 years. We have seen many different types of refrigeration systems, from Watkins cycle centers to hermetic pumps, rotary vane compressors to VFD screws; we have seen the times change. However, one thing has remained constant, and will continue to be true...cold is simply the absence of heat. Our customers want things cold. All refrigeration systems are, in their simplest form, a method of removing heat. We don't actually get rid of the heat; we simply remove it from the cold room and dump it to the condenser outside. We dispose of the heat. [MORE...](#)

How To Defrost Coils

Defrosting of evaporators can sometimes be a finicky process. Coil manufacturers do not have set recommendations, and generally, it takes some experimentation by the operator to nail down the process. You want to clear the coil of frost, get rid of the frost melt down the drain, remove moisture from the room and put the coil back into operation as quickly as possible. One note is that the drain lines should always have a trap. [MORE...](#)

Turn On Savings; Switch To LED

Did you know that the next generation of LED lighting could save you up 90% in energy costs compared to traditional industrial lighting, and has the lowest total cost of ownership? [MORE...](#)

Choose a Valve That Benefits You

We would like to introduce a new revolutionary cartridge design relief valve from Hansen. Marketed in late 2011, the EZ-SRV could be an excellent time saving option for your relief valve needs.

As many of you know, relief valves need to be replaced every 5 years per PSM requirements. It is a very labor intensive project since the inlet and outlet of the valve are directly threaded into the piping. With the new EZ-SRV relief valve, Hansen has made a valve body that is threaded into the piping with a cartridge that can be easily removed, similar to a bonnet of a shut off, solenoid or regulating valve.
