OSHA COMPLIANCE: Meeting the Challenge of OSHA Compliance

"Most of our customers rely on the contractor to set a level of quality. This is where the difference between contractors is most evident."

*Don Faust
Vice President Sales*

Ammonia: Your Best Choice Over CFC's – Ammonia is proven to be more efficient and is devoid of ozone-depleting and global warming characteristics of R-22. For five decades, Gartner Refrigeration has designed and implemented ammonia-based systems that set the pace in operation efficiency and safety.

Mandatory OSHA safety compliance is now here for industrial refrigeration operations utilizing ammonia technology. Gartner is up to speed on both the legislation and proposed means of standard compliance, and we're fully qualified to help you comply with Process Safety Management (PSM) requirements within EPA deadlines.

If you're planning a new system... You have a unique opportunity to meet compliance regulations right from the start, and save the substantial cost of future mandatory modifications. Selecting the right contractor is critical, as OSHA assigns responsibility for compliance to plant ownership-not to the contractor.

Unlike many general contractors and consultants, Gartner works with ammonia refrigeration systems every day. We offer the knowledge, expertise and safety record to be your partner in implementing a system that complies with regulations.

Gartner Compliance Capabilities:

- Plant surveys and audits
- Engineering and drafting services
- Coordination of written operating procedures and training manuals
- Change forms and work authorizations

- Complete PSM project consultation
